DETAILED ACTION

The Amendment filed July 9, 2002 has been acknowledged.

Withdrawal of Allowability

1. The indicated allowability of claims 25, 28, 29, 32, 34, and 35 are withdrawn in view of the newly discovered reference(s) to Okubo et al. (US 6,106,112). Rejections based on the newly cited reference(s) follow.

Drawings

2. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the protection guide surrounding the first detection projection (claim 35) must be shown or the feature(s) cancelled from the claim(s). No new matter should be entered.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Application/Control Number: 09/745,042

Art Unit: 2861

A person shall be entitled to a patent unless --

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

Claims 22-25, 27-30, 32-35, and 40 are rejected under 35 U.S.C. 102(e) as being anticipated by Okubo et al. (US 6,106,112).

Okubo et al. discloses all the claimed features of the invention including:

- an ink cartridge (Fig. 1) comprising:
- a cartridge main body (1) having a first case (lower case of 1, Fig. 1) and a second case (upper case of 1 separated from lower case by 15) joined to the first case (Fig. 1);
- first and second ink bags (22u, 22l) each comprising a bag main body (main body of 22's) storing ink and an outlet (23u, 23l) through which the ink can be discharged from the bag main body, the first and second ink bags being housed by the first case and the second case (Fig. 1), wherein when the first case and the second case are joined, the outlets of the first and second ink bags are pressed against each other by the first case and the second case (outlets are locked, one on top of the other, Fig. 3);

Application/Control Number: 09/7/15,042

Art Unit: 2861

- the first case comprises a bottom plate portion (2) and a side plate portion(4), the first case having an opening (opening of lower case, Fig. 1) on a top thereof for housing the first and second ink bags (Fig. 1), and wherein the second case covers the opening of the first case (upper case covers lower case, Fig. 1);

- a partition plate (15) attached to a predetermined position of the first case, said partition plate separating compartments housing the first ink bag and the second ink bag respectively (Fig. 1);
- the partition plate is detachable in a direction substantially perpendicular to the bottom plate portion along the side plate portion (via 14 and 10), and wherein each of the first case and the second case comprises a partition plate clamp face such that the partition plate is clamped by the partition plate clamp face (39) of the first case and the partition plate clamp face of the second case (39) for defining the position of the partition plate (Fig. 8);
- each of the first case and the second case comprises an ink outlet clamp face (24u, 24l) such that the ink outlets are clamped by the ink outlet clamp faces (Fig. 3) for defining the positions of the ink outlets, and wherein at least one of the ink outlet clamp faces is elastically displaceable (made of resin);
- each of the ink outlets comprises a contact portion in contact with each other and a clamp portion (11) clamping the partition plate with one another (Fig. 1);
- a first detection plate (18l) attached to the first ink bag, and having a first detection projection (19l) extended in a direction substantially perpendicular to the bottom plate portion (Fig. 1), the first detection projection moving in the direction

Application/Control Number: 09/745,042

Art Unit: 2861

substantially perpendicular to the bottom plate portion and projecting from the cartridge main body in response to the consumption of ink in the first bag main body (Fig. 1), and a second detection plate (18u) attached to the second ink bag, and having a second detection projection (19u) extended in the direction substantially perpendicular to the bottom plate portion, the second detection plate moving in the direction substantially perpendicular to the bottom plate portion and projecting from the cartridge main body in response to the consumption of ink in the second bag main body, wherein the first and second detection projections differ from each other at least in shape or color (Fig. 1);

- the first case forms a first ink cartridge (lower case containing 22l) for housing the first ink bag (22l) and the second case forms a second ink cartridge (upper case containing 22u) for housing the second ink bag (22u), further comprising a joint mechanism (portion where ink cartridges are joined including walls of 1) for detachably joining the first ink cartridge and the second ink cartridge (Fig. 1);
- the joint mechanism has snap-fit parts (27, 11) formed in a side portion of the first ink cartridge and in a side portion of the second ink cartridge (Fig. 7);
- the second ink cartridge comprises a recess (recess above 15, Fig. 1) into which the first ink cartridge can be fitted in the thickness direction (Fig. 1);
- the first ink cartridge comprises a side portion with a protection guide (3) surrounding the first detection projection.

Application/Control Number: 09/7

Art Unit: 2861

Allowable Subject Matter

- 4. Claims 26, 31, and 36-39 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
 - 5. Claims 41 and 42 are allowed.

Reasons For Allowance

6. The combination as claimed wherein a waste-ink holding member for storing waste ink poured therein from the outside thereof, said waste-ink holding member attached to the second case (claims 25, 31) or the length dimension of each detection plate is a value within the range of 0.4 to 0.8 times the length dimension of each ink bag (claims 36, 37) or the waste-ink holding member is placed in the cartridge having the smallest value resulting from dividing a volume of ink in the ink bag housed in each ink cartridge by the number of nozzles of the ink nozzle group corresponding to the ink bag (claim 41) is not disclosed, suggested, or made obvious by the prior arts of record.

Response to Arguments

7. Applicant's arguments have been considered but are moot in view of the new ground(s) of rejection.
